

Whole House Control by SpeakerCraft

SOUTHERN CALIFORNIA'S ELECTRONIC LIFESTYLE...

• By Design

Imagine your day starting with the thermostat adjusting to a comfortable temperature. The curtains open slowly and soft music begins to play. Today's technology offers unprecedented lifestyle options never experienced at home before.

Custom systems available for the homeowner offer a wide range of choices from basic designs to complex intelligent systems. Each offers a host of features to enhance the

home environment.

Experience Home Automation and Control

Home control is the ultimate luxury, creating an effortless way to manage everything from the lights, security system and sprinklers. With the push of a single button, you can set the lights to dim when it's time for the kids to go to bed or adjust the music in each room. Take

it to the next level and operate your home through either the cell phone or Internet.

Enjoy A Movie in A Dedicated Home Theater

Experience eye-popping images on screens that hang from above. Push button control drops the screen from the ceiling and the movie begins to play. Sound will explode as it travels from one side of the room to the

other. Now sit back and relax in comfortable theater chairs and enjoy the show.

Listen To Music Everywhere in The House

Music magically follows you as you roam from room to room. You can enjoy your favorite music in any part of the house, without the need for music components in every room. In-wall and in-ceiling speakers seamlessly blend into the décor of the home. Multi-room music systems make it easy to control the audio sources through the use of elegantly designed wall keypads.

Watch Movies In Any Room

Modern family rooms double today as media centers. The video signal can be sent to any room in the house from the same set of components while each video source can be controlled from any room through easy to use keypads or remotes.

Lighting Adds A Touch Of Ambiance

A well-designed lighting system can help you achieve the desired ambiance for all types of activities. Set the mood for dinner parties or reading at night. Lighting control is a great complement to lighting design. A good control system consolidates every light switch into a master keypad. Every lighting device can be controlled in any part of the house.

Simply Life With A Networked Computer System

Every home, large or small, can benefit from an appropriately designed network system that turns the house into a virtual office for the whole family. Multiple individuals can talk on the phone, send a fax and use the Internet at the same time. Computers in any room can be linked wired or wireless to a common set of peripherals, such as the laser printer or scanner.

Consult With Your Local Dealer

Professional dealers will help you understand the systems available and assist you in selecting components that are right for your needs and budget. They will recommend qualified design and installation personnel and provide helpful information on how to get the most enjoyment from your system. •
